PROFESSIONAL SUMMARY

Full-stack engineer who builds AI-powered systems that work for the people using them, not just the engineers who wrote them. At AdsGency AI, shipped production LangGraph pipelines, cross-platform data integrations, and a customer segmentation engine — owning architecture and delivery end-to-end. Comfortable with greenfield builds, ambiguous problems, and moving fast.

EDUCATION

San Francisco State University

Bachelor's of Science in Computer Science | GPA: 3.85

May 2025

EXPERIENCE

Software Engineer — AdsGency AI, San Francisco, CA

Aug 2025 – Present

- Built production LangGraph agent workflows for budget forecasting, customer segmentation, and multi-platform ad generation — connecting OpenAI, LangChain, and PGVector into pipelines that run automatically against customer data.
- Built a campaign recommendation system end-to-end — designed a unified backend service that pulled performance data, audience segments, and budget signals across platforms, scored and ranked recommendations with a keyword-matching engine, cached results in S3, and built the full frontend experience for users to view, refresh, and act on recommendations with generated reasoning.
- Built normalization metadata generation across 8 enterprise data sources (Databricks, Redshift, Snowflake, BigQuery, PostgreSQL, Shopify, Salesforce, MondayCRM) so the AI layer could analyze data consistently regardless of source.
- Built a real-time multi-campaign analytics dashboard pulling live data from Facebook, Google, TikTok, and LinkedIn into a single view — replacing the workflow where customers logged into each platform separately.
- Owned features end-to-end across a Next.js frontend and Python backend — taking work from API design through to UI without handoffs, across a large, shared codebase with multiple contributors.
- Led full internationalization across 7 languages — extracting hardcoded strings from the entire frontend, building a Babel-based translation pipeline, and updating every API controller to return localized responses.
- Built a DataValidationAgent with schema validation, anomaly detection, and data freshness checks on every ETL job — catching bad data before it reached customer-facing features, improving pipeline efficiency by 60%.
- Managed AWS deployments and CI/CD across Docker, GitHub Actions, EC2, S3, and ECR; stayed on call for live production issues and debugged failures in real time.

Software Engineer — SpeEdLabs, Remote

April 2021 – March 2023

- Owned end-to-end development of the quiz-taking experience — built the React/TypeScript frontend handling question rendering, timer logic, navigation, and answer state.
- Built Node.js/NestJS backend APIs for question fetching, response storage, and quiz submission with incremental saves to prevent data loss mid-session.
- Managed persistence with PostgreSQL and Redis; deployed and maintained services on AWS.

PROJECTS

Personal Finance Tracker

May 2024 – Aug 2024

- Designed the full database schema for users, accounts, transactions, budgets, alerts, and shared savings groups — modeling relationships to support recurring transactions, group savings goals, and advanced analytics.
- Built budgeting logic that recalculated spending against monthly category budgets on every transaction and triggered alerts when users crossed configurable thresholds (e.g. 80% of budget).
- Built backend aggregation queries to keep budget state, alert conditions, and dashboard metrics consistent as transactions were added, edited, or deleted.
- Built frontend dashboards visualizing spending patterns, category breakdowns, monthly trends, and savings progress — transforming raw transaction data into actionable user insights.

EduBridge: Learning Platform

Jan 2024 – May 2024

- Built and shipped a role-based web platform in a 5-person team — owning frontend (React), backend APIs, and AWS deployment end-to-end.
- Debugged authentication flows, role-based access control, and cross-layer data mismatches between frontend and backend under real user conditions.

LEADERSHIP EXPERIENCE

President - Indian Student Association at SF State

Aug 2023 – May 2025

- Led a 10 member team to plan and execute large campus events, coordinating logistics, timelines, and stakeholder communication for 300+ members and guests.
- Spearheaded SF State's largest Diwali celebration, driving a 30% increase in association membership and fostering community engagement among 180+ attendees.

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, Python, SQL
- Full-Stack: React, React Native, Next.js, Node.js, NestJS, FastAPI, REST APIs
- AI / LLM: LangGraph, LangChain, OpenAI, Cursor, Claude, Codex, Agent Workflows
- Data & Infra: PostgreSQL, Redis, BigQuery, ETL Pipelines, AWS, GCP, CI/CD
